

New MBAKS ADUexpo Joins Popular Remodeled Homes Tour for 2024.

Accessory Dwelling Units, or ADUs, along with their close cousin, the Detached Accessory Dwelling Unit, or DADU, are unique and innovative solutions that help boost much needed housing supply.

ADUs provide additional housing units compatible with the look and scale of single-dwelling development, making efficient use of existing housing stock, and providing a mix of housing options. There are many benefits to ADUs including ease for first-time buyers in qualifying (renting out an ADU can provide additional income as well), enabling seniors to age in place, and expanding options for multi-generational living.

Select ADUs and DADUs, built by MBAKS builder members, will be featured alongside the Remodeled Homes Tour this year, allowing builders, homeowners, and others to discover the benefits and opportunities these homes have to offer. We encourage those interested in ADUs and DADUs to also visit the amazing, remodeled homes open for showing on the same day.

Additionally, the “expo” portion of the ADU/DADU tour will consist of an optional, free educational session for interested homeowners before the homes open for viewing. Interested parties will hear from industry experts about the many benefits of these types of homes and learn how they too can determine if buying or building an ADU/DADU on their existing property is the right decision for them.

The entire ADUexpo (information session and self-guided tour), and the Remodeled Homes Tour are completely free to the public.
